Winner QED Qunex OT

When connecting your DVD player to a home cinema amplifier, you need a well-made, reliable cable to ensure the best possible sound quality. That's exactly what this optical digital audio interconnect from QED offers. It's fashioned from a medical grade fibre-optic core, polished at both ends for maximum light-signal transfer, and covered in a durable, flexible PVC jacket. At each end is a precision moulded plug with spring loaded tips and zinc-plated barrels. Despite this solid build quality, it's not expensive and the end results are out of this world. Dolby Digital bitstreams are transferred with all the sonic detail intact, and there's no unwanted noise or interference. A cracking cable.
